## Horizontal Alignment Test

### Example:

### Exercise:

#### Problem:

#### Finding the Trigonometric Functions of an Angle

Find  $\sin$ ,  $\cos$ ,  $\tan$ ,  $\sec$ ,  $\csc$ , and  $\cot$  when  $\theta = \frac{\pi}{6}$ .

#### Solution:

We have previously used the properties of equilateral triangles to demonstrate that  $\sin \frac{\pi}{6} = \frac{1}{2}$  and  $\cos \frac{\pi}{6} = \frac{\sqrt{3}}{2}$ . We can use these values and the definitions of tangent, secant, cosecant, and cotangent as functions of sine and cosine to find the remaining function values.

#### Equation:

$$\begin{aligned}\tan \frac{\pi}{6} &= \frac{\sin \frac{\pi}{6}}{\cos \frac{\pi}{6}} \\ &= \frac{\frac{1}{2}}{\frac{\sqrt{3}}{2}} = \frac{1}{\sqrt{3}} = \frac{\sqrt{3}}{3}\end{aligned}$$

#### Equation:

$$\begin{aligned}\sec \frac{\pi}{6} &= \frac{1}{\cos \frac{\pi}{6}} \\ &= \frac{1}{\frac{\sqrt{3}}{2}} = \frac{2}{\sqrt{3}} = \frac{2\sqrt{3}}{3}\end{aligned}$$

#### Equation:

$$\csc \frac{\pi}{6} = \frac{1}{\sin \frac{\pi}{6}} = \frac{1}{\frac{1}{2}} = 2$$

#### Equation:

$$\begin{aligned}\cot \frac{\pi}{6} &= \frac{\cos \frac{\pi}{6}}{\sin \frac{\pi}{6}} \\ &= \frac{\frac{\sqrt{3}}{2}}{\frac{1}{2}} = \sqrt{3}\end{aligned}$$
